

# PLOSSYS® netdome System Integrations

## PDM REPRO SERVER PROZESSOR

### AUTOMATIC PROCESSING OF OUTPUT JOBS

// Output jobs from third party systems are automatically processed via a document output management system from SEAL Systems.

All current image and document formats are distributed electronically or as paper.

# System-Integration PDM Reproserver

## INTERFACES ...

### ... FOR ORDERING

#### BACKGROUND PROCESSING

Order creation is handled in SEAL Systems standard RLI (ReproList):

- ASCII text format
- Defaults
- Processing modes
- Job specific output parameters
- Document specific output parameters
- Recipient definitions
- Configurable set formats for document identifications
- Document list

### ... FOR DOCUMENT STORAGE

An optional document management system for the duplication job can be the data (image) supplier (DMS, PDM, EDM, CAD, ERP, ...).

When storing image files the document management system must have a batch or command line oriented interface or an API. There are standard solutions from SEAL Systems or it's partner for many merchantable systems.

All data formats supported by SEAL Systems can be processed (e.g. CGM, HPGL/2, CalComp-907, TIFF/G4, PostScript, ASCII ...). For many applications there are special application converters (DOC, DWG, XLS, CDR, PPT,...).

### DOCUMENT CONTROL

ISO 9000 compatible via stamps/watermarks with status, date and use

### REQUIREMENTS

PLOSSYS® netdome or gXnetplot with the options „set processing“ and optionally „stamps/watermarks“ must be installed. The processing of the requested file/image data formats must be licensed.

#### INTERACTIVE PROCESSING

For many PDM systems there is an optional normed dialog interface from SEAL Systems – according to requirements in client/server technology or as Web interface:

- Set parameters for output jobs
- Process Output jobs
- Compile personal device lists

### USAGE

Automatic generated repro jobs are processed automatically. The repro jobs are generated dependant upon function and recipients.

Sorting and folding become obsolete with suitable output hardware.

Quick preparation times and economical drawing distribution enable new organization forms.

### PROCESSING METHODS

If document data or document files can't be found, several processing methods are adjustable:

- Missing page
- Partial supply
- Scan job

Output processes:

- Paper output: Includes all manufacturer, brands and models
- Large and small format output
- Electronical distribution: CD, email, print-to-file, Web portal

### RELATED PRODUCTS

SEAL Systems interfaces

- axalant
- eMatrix
- Windchill PDMlink
- CIMdatabase
- EDS Teamcenter
- Pro\*File

### SYSTEM ENVIRONMENT

Windows 98, ME, NT, 2K, XP, UNIX

### LICENSING

Server license without user restriction.
