

FACTSHEET

OpenOffice Format Converter

Convert data from OpenOffice Applications into a neutral format using a server

What is OpenOffice Format Converter?

This application converter for OpenOffice interprets files from Writer, Calc and Impress, and generates long-term, archive and neutral formats for further use.

What does OpenOffice Format Converter do?

Problems can often occur when original files are created in applications and kept unchanged for long periods of time. Application files are dependent on their version and operating system. These files must be converted when the IT environment is changed, but data migration to archives is not wanted. A better approach is the conversion of application files before storage in file formats **standardized for long-term archiving**.

Your benefits at a glance

Systems' application server performs all tasks of **collection** and **neutral data conversion** of application data from OpenOffice.

Files suited for follow-up processes are provided: **long-term archiving**, **printing**, **publishing** and across-platform **information exchange**.

Input formats

OpenOffice: Writer, Calc, Impress..

Output formats

PDF, PDF/A

The files can be compiled per order into an output file or issued individually.

OpenOffice Application Converter

Functions

The converter functions within SEAL Systems' DPF environment (Digital Process Factory). Scaling, parallelization, prioritization and queuing are available in DPF.

The pre-configured processes of DPF4Convert supports many typical customer scenarios. Additional services are available like check-out and check-in of current DMS and PLM systems, stamping, title block updating with meta data from the managing system, and other functions. Further customer scenarios can be quickly and easily configured with DPF's graphic configurators.

The underlying DPF technology guarantees high throughput by parallelizing and scaling, robustness through its own process controls, integration in system monitoring software, and tracking over native clients, web clients and integrates into management systems such as SAP-DVS.

Neutral files are recreated over an intermediate format through export. Strong emphasis is placed on true-to-original output, so that the generated neutral data corresponds exactly to the results from the interactive export.

The generation process can result in an accumulation of metadata (for example XMP standards with PDF/A).

All output files are examined before output, according to desired data standards (PDF ISO 32000, PDF/A ISO 19005).

Product code

C100 OpenOffice Bundle

System requirements

The corresponding Office application must be installed on the conversion server. See all details for recommended computer equipment under www.sealsystems.com/computer-equipment/

Application functions

SEAL Systems applications converters can be configured in a variety of ways. Here are two examples:

- Data processing from different versions of Office
- Intelligent, adjustable procedures with interactive elements like message boxes, macros, pop-up windows, etc.

Interfaces

SEAL Systems' Application Converter can be used in different environments.

- Conversion Server for SAP DVS
- Conversion Server for SAP Records Management
- Conversion Server for Siemens PLM Teamcenter DOC4TC

For other applications there's DPF4Convert with integration interfaces.

- Command Line with Native or Java Client
- Input Directory (Watchdog/Listener)
- Interactive Client
- Windows Explorer Context Menu
- Web Service

Licensing

Licensing is based on server. User-based licensing can also be advantageous when integrating in a SEAL Systems conversion server for SAP or Teamcenter.
